Building Blocks 1

build up up and up

big. little. red. yellow.

Build up and up

Building Blocks 1

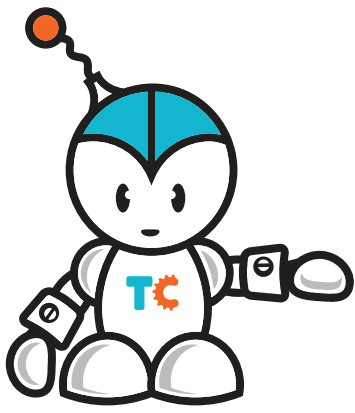

Designed to be used with commercially available building blocks such as Duplo® and Lego®. Kids often have difficulties processing all of the **incoming sensory information** from a task and don't know where to look or pay attention only to the things that make sense to them. There are **many characteristics** to pay attention to such as colour, size, shape, positioning, quantity etc. Kids need to know which are the important things to pay attention to, to help with the **planning and sequencing** of the task.

Attention to detail is required to work out how many you need, what comes next, as well as where do they go. Kids who are not interested in **visual supports**, often need to develop more **efficient** visual processing skills first to enable them to understand all of the detail of what they are looking at.

Building Blocks 1 is helpful in teaching kids **'how' to learn**, so that they can increase their ability to pay attention to the strategies being taught to them. The instructions are designed to guide kids through the building step by step using visual guides and to **reduce the amount of reliance on an adult** telling them what to do next. Kids need to learn to 'look' for the answer when given a new toy to play with or a multiple step task rather than waiting for the prompt.

The worksheets are designed to support **organisation and planning skills** with a list of what you need, as well as the overall design of what you need to build. Kids can build on top of the actual worksheets to help with attention to detail. The **Boardmaker PCS** (Picture Communication Symbols) are used to help **understand** what to do.

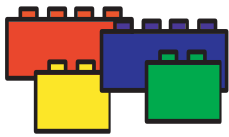

big. small. yellow. red.

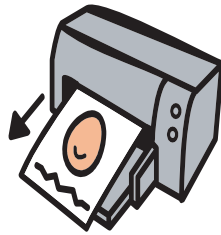

Build up and up

Building Blocks 1

WHAT DO YOU NEED

Duplo® Blocks

Laminate the pages

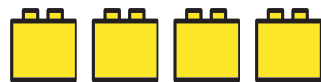

Use a container with separate storage areas or put each color in a separate bag. This is extremely important in reducing the sensory overload for kids.

TIPS FOR HELPING YOUR CHILD

It is important to choose to start from either the top or the bottom. Do not start from the middle of a shape.

Get out on the table the correct number of blocks, so your child does not have to sort to find them.

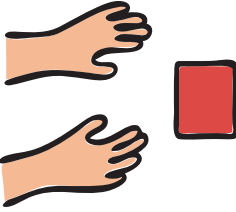

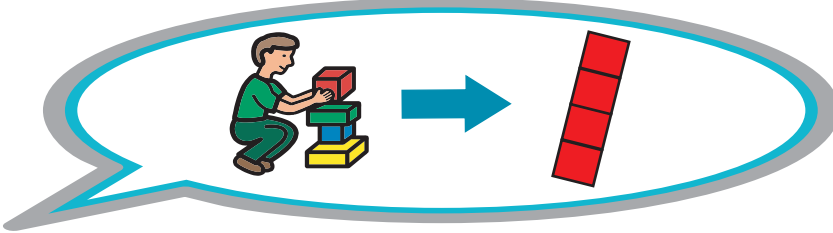

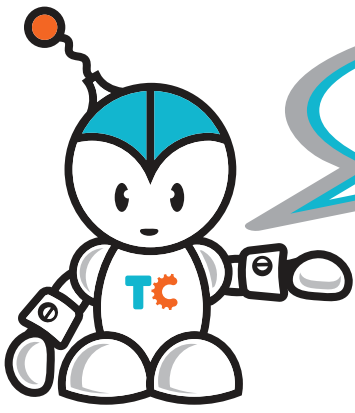

Hand your child each block so that they can concentrate on where it goes rather than what they need.

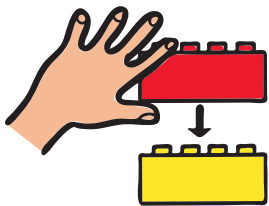

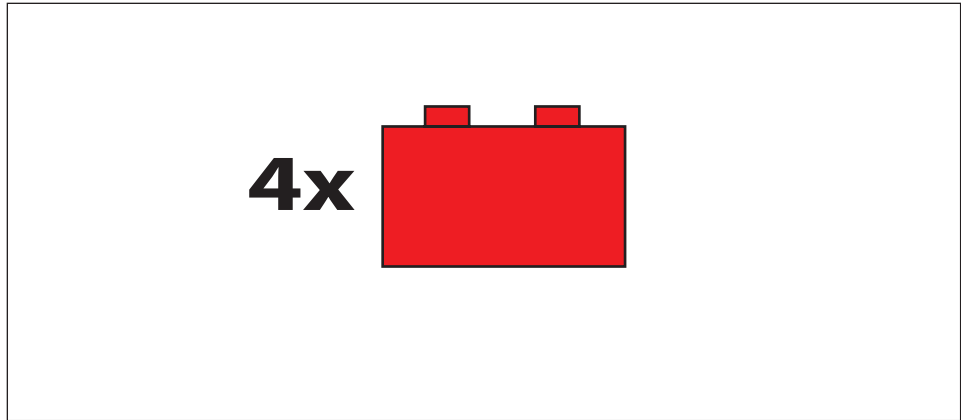

Build on top of the actual workbook template. This makes it easier to point to what comes next.

Building Blocks 2

What can I build?

up. down. blue. green.

Building Blocks 2

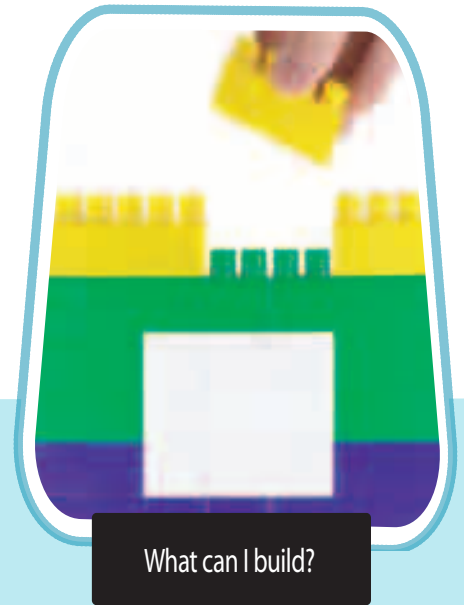

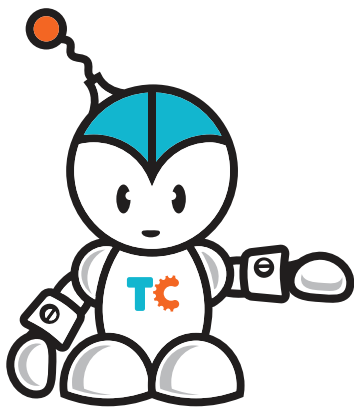

Designed to be used with commercially available building blocks such as Duplo® and Lego®. Kids often have difficulties processing all of the **incoming sensory information** from a task and don't know where to look or pay attention only to the things that make sense to them. There are **many characteristics** to pay attention to such as colour, size, shape, positioning, quantity etc. Kids need to know which are the important things to pay attention to, to help with the **planning and sequencing** of the task.

Attention to detail is required to work out how many you need, what comes next, as well as where do they go. Kids who are not interested in **visual supports**, often need to develop more **efficient** visual processing skills first to enable them to understand all of the detail of what they are looking at.

Building Blocks 2 is helpful in teaching kids how to **build recognisable objects**. Some kids can build quite complex structures when they are choosing what they want to make, but find it difficult if you ask them to build something else. E.g. they might make fantastic cars or spaceships but if you ask them to build an elephant they **wouldn't know where to start**. These worksheets are a great introduction to the **planning** need for drawing, where kids need to identify the most **prominent features** to include e.g. Elephant - legs, stomach, head, trunk.

The worksheets are designed to **support organisation and planning skills** with a list of what you need, as well as the overall design of what you need to build. Kids can build on top of the actual worksheet to help with **attention to detail**. The **Boardmaker PCS** (Picture Communication Symbols) are used to help **understand** what to do.

Use a container with separate storage areas or put each color in a separate bag. This is extremely important in reducing the sensory overload for kids.

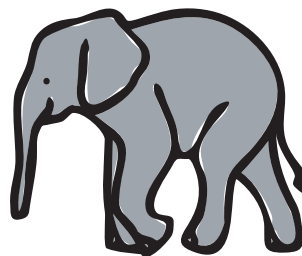

TIPS FOR HELPING YOUR CHILD

It is important to choose to start from either the top or the bottom. Do not start from the middle of a shape.

Get out on the table the correct number of blocks, so your child does not have to sort to find them.

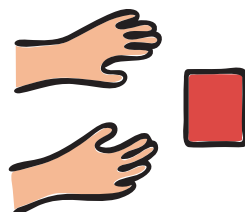

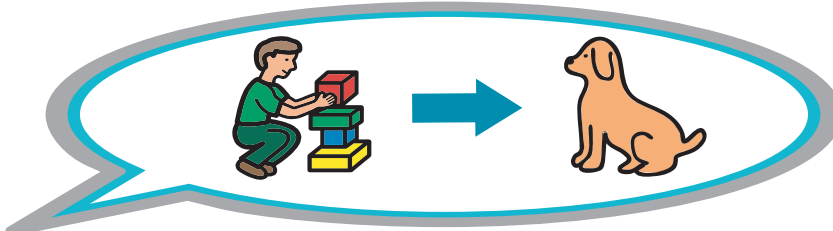

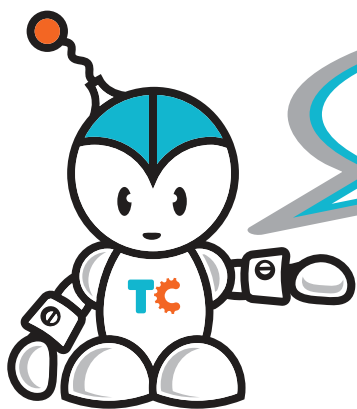

Talk about what parts of the object you are building e.g. legs of the elephant, then the trunk and tummy.

Build on top of the actual workbook template. This makes it easier to point to what comes next.

up. down. blue. green.
